Catavolt

A NEW WAY TO MANAGE DATA VIA MOBILE PHONES, WIDGETS & GADGETS WITH SECURE CLOUD DEPLOYMENT.

INTRODUCING

XAEXTENDER

ABOUT CATAVOLT

Catavolt is a new software company based in Alpharetta, Georgia.

Our roots include extensive experience in developing and marketing Power-Link, Net-Link, Enterprise Integrator, System-Link and Link Manager.

Now we are developing products for the XA community that deliver rich application function over the Internet.

The Internet continues to evolve, providing fast worldwide access to a wide variety of Internet-capable devices at a cost approaching zero. The devices themselves are evolving far beyond simple cell phones, providing amazing computing power in ever-smaller packages. If only there were a way to deploy XA objects onto those devices, literally putting XA into a user's pocket or purse!

Introducing the XA Extender from Catavolt. The XA Extender (XAX) provides a secure, high-performance cloud computing environment for Infor ERP XA.

Using XAX, you could look at a list of purchase orders on your mobile phone, drill down to get additional data, and then approve them… all while waiting for lunch.

Using XAX you could open a widget to keep an eye on orders, shipments or cash transactions…all updated real time in a little corner of your desktop.

Using XAX, you could update a service record by adding notes, hours, parts and even attaching pictures…while waiting to catch your flight home.

XAX takes full advantage of the IDF technology by using System-Link to communicate with XA. Standard XA objects as well as those defined in Enterprise Integator are available to the XAX designer.

Once defined in XAX, an XA object can be easily configured for various user interfaces such as mobile phones and desktop widgets. In addition, XAX provides a rich browser experience with calendars and interactive graphs. The XAX user can even attach documents, pictures and other items to XA business objects.
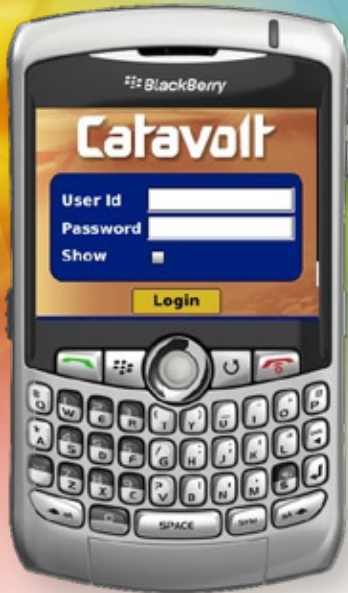

The XA Extender allows companies using Infor ERP XA to evolve with the Internet. With XA on those amazing little devices, some creative thinking can have surprisingly big results.

INTRODUCING

XAEXTENDER

You will be pleased to discover how easy it is to start using XAX. Simply configure your firewall to allow our server to talk to yours. Learning XAX takes a few hours. Connecting takes a few minutes. It won't be long before you're on your way to becoming an XA cloud computing expert!

What about Security?

The Server Connection
No one wants to open their business system to the world. With XAX, you don't have to. Instead, you configure your firewall for point-to-point SSL communication with our servers, located in a highly secure datacenter.

The Client Connection
The communication between the Catavolt servers and your users' devices is encrypted, preventing eavesdropping, tampering, or any other malicious interference.

What about Performance?

The Server Connection
We configure System-Link for maximum performance. We optimize our requests for maximum performance. The result is a very short request-response turnaround.

The Client Connection
Catavolt has designed a rich services interface between our servers and the user interface. This makes the packets of data very small and very fast.

What about Features?

Extend IDF to the cloud, and what do you get? Start with these...

MOBILE INTERFACE
You have e-mail on your phone. Why not XA? Put it on your BlackBerry or iPhone...or any J2ME device. Leave your PC at the office and take XA with you.

WIDGETS & GADGETS
You don't need all of Power-Link? Use a widget to keep tabs on shipments, cash flow, or whatever you need from XA. Use sorts and filters to see exactly what you want.

ADVANCED GRAPHS
Does the graph look interesting? Drill down to the next level. Go down to the data if you want, and even export it to a spreadsheet.

TWO-WAY ATTACHMENTS
Send spreadsheets by simply attaching them. Let your partner do the same back to you. It's secure, fast and simple.

CALENDARS
Display XA data in a calendar. Drill down to see more detail. Drag and drop to change the date and time – all subject to normal XA editing.
